

# C-CAMP Med Tech Set-up for Incubatees

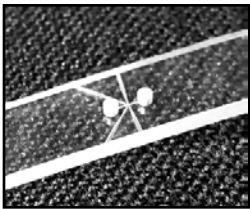

Through this set up C-CAMP aims to help Med Tech innovators towards development of their devices.

Design Platform

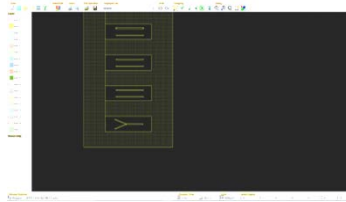

Electronics and Automation Platform

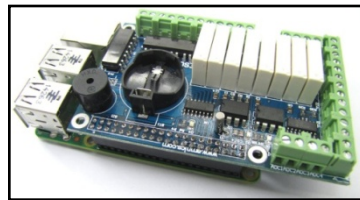

Fabrication Platform

## Design platform

We believe in providing a holistic approach to the designing of the devices. This platform design platform will combine CAD design expertise with insights on fabrication to have easy to be translated device designs. We provide support for 3D CAD designs for CNC and 3D printing as well as Layout designs for silicon/PDMS fabrication.

## Electronics and automation platform

We further provide an electronics and automation platform for the companies to build, test and prototype their device and circuitry. Simple electronic tools, raspberry pi and arduino access is provided, and we plan to expand to LabVIEW based automation access in the near future.

## Fabrication platform

We also provide a fabrication platform to help innovators source their devices. We have some simple production equipment, and comprehensive ties with manufacturing companies to help provide medical diagnostic devices.
